TELESCOPIC HANDLERS

HTH

MAGNI: EXPERIENCE, RELIABILITY and VERSATILITY

MAGNI's expertise has been applauded as the industry leader for the development of a specific range of heavy-duty machines: the HTH RANGE.

The technical features of all HTH models have been specifically designed to make these machines the best choice in quarries, mining, oil & gas plants and also the heavy lift industry, thanks to their lifting capacity from 22,046 to 99,200 lbs.

In addition, a specific range of attachments have been developed, giving customers the ability to choose the best solution for their needs.

CABIN

PATENTED DESIGN & FULL-VISIBILITY CAB

The innovative design of the MAGNI cab has been developed to grant maximum comfort and safety for the operator. It is, in fact, certified FOPS/ROPS and is equipped with a protection grid on the top to always ensure safety.

The cabin has full-visibility: the wide windshield from the bottom to the top allows the operator to look at the load even when it is suspended above his head or when the boom is completely lowered. The seat tilts back 15° to optimize operator visibility when delivering materials.

The cabin is also fully enclosed and airtight, pressurized and provided with 100% inlet air filtration. Heating and air conditioning are part of the standard equipment for all models.

The cabin is equipped with a touch screen display for the control of the entire machine. With a movable steering column, which allows the operator to get in and out very easily and achieve a comfortable driving position.

Inside the cabin you will also find a cup holder for both hot and cold beverages.

Also installed as standard in the cabin is a USB socket for charging tablets and smartphones.

Cup holder

MAGNI CONTROL PANEL

The display has been designed to control all the functions of the machines in the most simplistic and intuitive manner. In case an error occurs, the software communicates with the operator with written messages available in 8 different languages.

All the information of the machines is efficiently organized on the display and can be selected with the touch of a finger.

INTEGRATED DIAGNOSTIC PANEL

A complete integrated diagnostic panel is available that, in the case of electronic and software failures, reduces after sales costs, machine downtime and allows remote assistance via the internet.

CONTROL PANEL

STANDARD TOUCH SCREEN

All HTH models are equipped with a 7" touch screen display. The software installed for the management of the whole machine is optimized to collect all usage data and conveys that in 3 pages, neatly arranged. Browsing the pages is extremely easy and intuitive even for new users.

XL TOUCH SCREEN

As an option it is possible to ask for a wider and even more powerful 10" touch screen. The Linux operating system installed on the display makes browsing through pages faster and smoother even in prolonged use.

The larger screen provides an enhanced view of the load charts and an easier selection of icons and buttons during use. It also allows for faster and easier software updates when needed and ensures enhanced operational ease and intuitiveness.

REMOTE CONTROL TYPES

The HTH range can be equipped with two radio remote controls. One will allow the operator to perform all the hydraulic movements of the machine. The more advanced version of the two will allow the operator to drive the machine up to a speed of 3mph from a distance of 100 meters. The joysticks of the radio controls are electro-proportional like those present in the cab: they consistently reproduce the same precision in the execution of the commands.

MCTS

MAGNI COMBI TOUCH SYSTEM

MCTS represents a totally new concept for machine management. It is easy to use for both novice and expert operators thanks to its intuitive style with icons. The system is divided into 3 main pages each dedicated to different functions of the machine. You can easily select each page using the joystick selector, the icons will guide you through your selection. The correct page comes on when a function is performed. This ensures a safe operation by the operator.

COMMAND PAGE

The upper part is reserved for the basic controls of the cab (i.e. temperature and ventilation), the central part is dedicated to the lights of the machine, while the lower part is dedicated to the various options available and to switch from the cab control to the radio control.

LOADING DIAGRAM PAGE

MAGNI uses the "Load Moment Indicator" system, responding to all crane regulations. The display shows a dynamic load diagram that allows you to see the load center move according to the real movements that the operator performs.

CUSTOMIZATION PAGE

This screen allows the operator to set the limitations of the working height and hydraulic speed of the movements: up-down and extension-return of the arm, tilting of the forks and also all the functions of the accessories for dangerous or repetitive maneuvers.

PERFORMANCE ON TYRES

LEVELING SYSTEM ON TIRES

The leveling system on the tires is standard for all HTH models. This makes it possible to adapt to any uneven ground while working providing a safer environment to the operator.

This system is particularly useful during procedures involving heavy material handling with forks and container lifting.

FROM +/-5° TO +/-10°

0°

FROM +/-5° TO +/-10°

OFF-ROAD

This feature is particularly important when working operations have to take place on unstable ground conditions, such as in mines and quarries, or when you have heavy loads to increase adherence on the ground. The 4WD

provides optimal traction on difficult terrains (e.g. sand, mud or pebbles). Also, the high ground clearance makes this machines highly suitable and safe for uneven grounds.

GRADEABILITY

The machine provide excellent safety while working on slopes or very steep terrains. All HTH are proved to also work easily on gradeability from 34° to 58°.

DRAWBAR PULL

From 88 kN to 390 kN.

3 TYPES OF STEERING

The possibility to choose the best movement according to the working space is a fundamental feature. On all HTH machines it is possible to choose the steering type that best suits your tasks:

- **Front:** best choice for on-road driving or even ground
- **All wheel:** offers an improved turning radius for moving in tight spaces
- **Crab:** offers the ability to approach from the side

Front

All wheel

Crab

TECHNICAL SPECIFICATIONS

TRANSMISSION

On each model the transmission has been optimized to provide the best possible performance.

The **HTH 30.12** and **HTH 35.12** are equipped with a transmission that is a heavy duty automatic shift box type power shift with 3 speeds electronically synchronized. It is a 2WD transmission with automatic engagement of 4WD in case of slippery conditions.

For **HTH 24.11** and **HTH 27.11**, the transmission is hydrostatic and electronically controlled with a central self-locking differential, to prevent slips and problem with adherence to the ground.

For **HTH 10.10**, **HTH 16.10** and **HTH 20.10** the transmission is hydrostatic and electronically controlled made of a variable displacement pump for an accurate handling of the load.

HTH 30.12 - HTH 35.12

HTH 24.11 - HTH 27.11

HTH 10.10 - HTH 16.10 -
HTH 20.10

ENGINE

Each model is matched with an engine that provides optimal lifting and driving performance. From Deutz 100 kW, for the small HTH 10.10, to Mercedes 260 kW, for the biggest models HTH 50.14, HTH 35.12 and HTH 30.12.

The engine compartment is designed for easy access to facilitate inspection and maintenance.

AXLES

The machines are equipped with heavy duty axles with a hydraulic servo-assisted multidisc brake in an oil bath, with heavy duty 4 stage epicyclic reduction.

The hydraulic circuit is Load Sensing with 350 bars of working pressure. It is composed by a 115 high precision pump, two electro proportional joysticks and a SIL 2 main valve. The system responds to the European regulation EN13489 regarding the electrical controls. The electronic management of the hydraulic circuit automatically selects the best engine rpm to provide the best performance. This results in a reduction in fuel consumption on long working cycles. With the Magni software it is possible to manage the flow sharing, therefore ensuring safety and precision while performing up to 4 hydraulic movements simultaneously.

The electric circuit is **IP67** and is protected from infiltrations of water and dust. The circuit is **24V** and CAN BUS; this means that the system can easily collect all details of electric and electronic components. All the data is then organized on the screen in the cab and can be viewed neatly by the operator. CAN BUS technology requires 1/3 less cables, this reduces the risk of failure on the circuit and increases the reliability of the machine.

TECHNICAL SPECIFICATIONS

BOOM

Made of high resistance steel, the boom is extremely durable and rigid, but at the same time is very light, increasing the load capacity and avoiding the deflection on the outreach. The hydraulic hoses are completely inserted inside the boom, to protect them from any breakdown due to accidental collision.

The 3-block-hoses, 3 + 3, prevents friction between them, contributing to a drastic reduction of damages. The sliding guides are fixed on steel blocks, which are secured to the arm to avoid breaks in case of excessive rubbing.

AUTOMATIC ATTACHMENT RECOGNITION

The automatic attachment recognition system - RFID - is available on every model of the HTH range. The attachment, once mounted on the machine, is automatically recognized by the machine and automatically shows up on the touch screen displaying the correct load diagram and prepares the load limitation system. The Q-fit, thanks to its low weight, improves lifting performance. This system on HTH models is much safer and prevents the risk of choosing a wrong attachment.

TECHNICAL SPECIFICATIONS

LOAD MOMENT INDICATOR (LMI)

All MAGNI telehandlers are equipped with a load limiting system that automatically loads the diagrams for each attachment and continuously analyzes the position of the load in space in each operation. The touch screen display in the cab dynamically shows the position of the load according to the operator movements.

If an overload occurs, the system interrupts the movement immediately, allowing only the retraction and lowering of the boom.

A

Potentiometer for angle and length of boom detection with redundant safety.

B

Detection of load weight through 4 pressure transducers: 2 placed on lifting cylinders and 2 on compensation cylinder.

C

Flashing beacon.

D

Dynamic representation of all the collected data on the touch screen for the operator.
